

NewTek Connect Spark™

Now you can capture video from digital cameras and other devices wirelessly or over Ethernet whenever you need it —from anywhere on your network.

Capture the output of cameras and other video devices for live video production, editing systems, multi-media systems or streaming devices.

NewTek Connect Spark converts your HDMI or SDI video source to NDI® and makes it available as a video source for your applications. It's also compatible with hundreds of systems, devices, and applications that support NewTek's innovative Network Device Interface technology.

Portable, affordable, and WiFi-capable, and with no complex configuration required, Connect Spark is the simplest solution for working your existing gear into modern IP-based workflows, and ideal for live production, streaming, sports, competitive and social gaming, corporate communications, classroom production, and more.

At a glance

- **Any Source, Any Setup**

Available with 3G-SDI connections for integrating with professional video equipment, or HDMI connections for use with consumer cameras, game consoles, and everyday A/V gear.

- **Pristine HD Video**

Capture and deliver broadcast-quality high definition video, with support for video formats up to 1080p 60, NDI output, and simultaneous video loop out.

- **Built-In Recording and Tally**

Record your live video to compatible SD or USB storage media for archive or on-demand viewing, and easily recognize when your source is on Program or Preview.

- **Web Interface**

Configure settings and monitor video from the browser of any networked computer or mobile device with an intuitive, Web-based user interface.

- **Universal Compatibility**

Works with live production systems from NewTek and other manufacturers, as well as popular software-based video tools and desktop applications.
